Subject: follow up re: recent work at Gold King Mine

Hi all,

To follow up on our call the other day, I wanted to provide background information regarding the recent work at the Gold King Mine. The work included the initial activities being conducted as part of a removal site assessment. The plan was to re-open the Gold King Mine portal and workings to investigate the conditions to assess the on-going releases. This included the extraction of an unknown amount of water ponded behind the portal debris blockage, followed by removal of the blockage and stabilization of the portal opening.

When completed, the assessment would identify and characterize specific water flows into the mine and evaluate potential means to mitigate those flows if possible. This evaluation was being performed in parallel with the time-critical removal action at the Red and Bonita Mine in order to observe possible changes in the discharge at the Gold King Mine that may be caused by the installation of the bulkhead at the Red and Bonita this summer. The bulkhead was scheduled to be completed this Fall.

Please let me know if you have further questions.

Thanks,

Carolyn
